# ToolCAM

ToolCAM is an **ATool Software**'s product that allows in few steps to import and convert **DXF** files.
With **ToolCAM** you can have directly, or using a dedicated layer structure, machining **Part-Programs** for different type of **CNC Machines**.

ToolCAM gives the possibility to preview the imported drawing, if necessary apply simple modifications , and then, with CAM functionalities, create quickly the **Part-Program**.
ToolCAM philosophy is to give you the maximum semplicity to create **CNC** code.

Import DXF

output

ToolCAM functionalities can be extended by adding optional modules, including the "**NESTING**" that creates an optimization of imported **DXF** drawings, and subsequently process the scheme.

ToolCAM is the missing step between a CAD environment and the **Machine**.
ToolCAM can process **Part-Programs** for a large number of **CNC Machines**.
It's available a special option to add different **Machine Configuration**.
